पृष्ठ .....

2. AI Application in cyber security - case study

→ AI application in cyber security means using AI to protect computers, networks, website, serves from cyber attackers.

→ Darktrace - AI based Autonomous threat Detection

* What is darktrace :- Darktrace is a cyber security company that users AI and machine learning to dect cyber threats

→ Simple example
Imagine a company employee normally

- logs in from delhi
- Work from 9 to 6 Pm
- Access company file
- uses normal application

Suddenly the employee account

- Log in from another country
- Download thousands of file
- Send data to unknown server.

2. Cylance (BlackBerry) - ML based endpoint Prodection

→ What is cyclance:- cyclance is an AI/ML based cyber security technology associated with blackberry

It focus heavily on protecting endpoints

→ What is an endpoint: An Endpoint is basically a device connected to a Company network such as

- Laptops
- Desktops
- Mobile
- Server

How it Works

File applications
↓
Machine Learning analyzis it.
↓
is it suspecious
↓
yes block/alert
↓
No allow

3. IBM QRadar – AI Assisted SIEM for Thread Intelligence

* What is QRadar

→ IBM QRadar is cybersecurity platform that help security teams, collect, analyze, and investigate security events.

Q What is SIEM?

→ Security Information Event Management

For Example

- 500 computers
- 20 servers
- Firewalls
- Routers
- Cloud systems
- Applications

All of these system generate security logs

4. Google Chronicle – Cloud-native security analysis

Q. What is google Chronicle:- It is a Cloud-based cyber security platform design to help security term store data, analyze, investige data.
